

Amelie Jarlman, Jarlman Konsult AB

4th Nordic-Baltic diatom intercalibration/harmonization exercise 2013

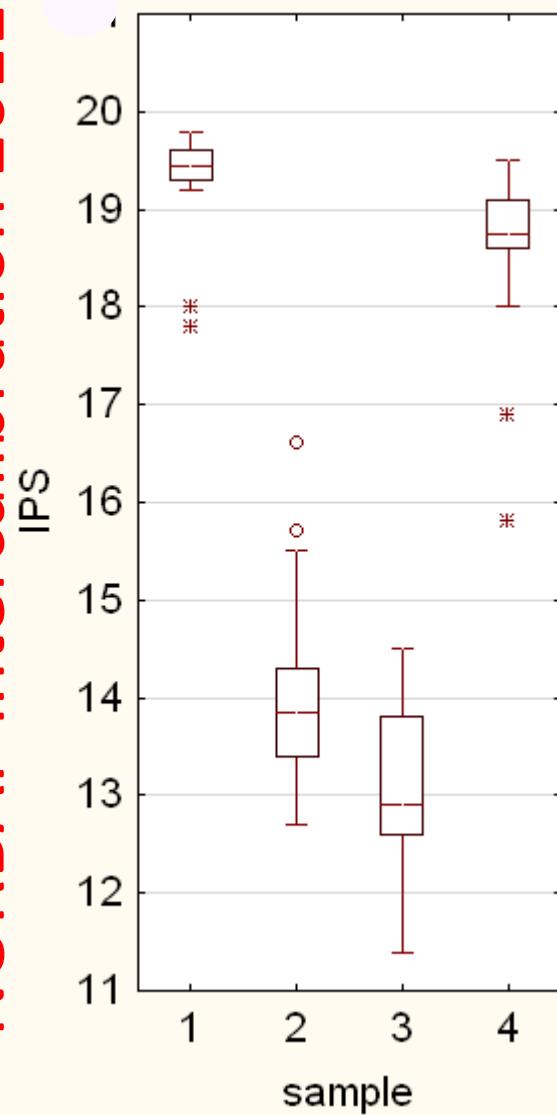

Organization: Maria Kahlert & Amelie Jarlman

Auditors: A. Jarlman &

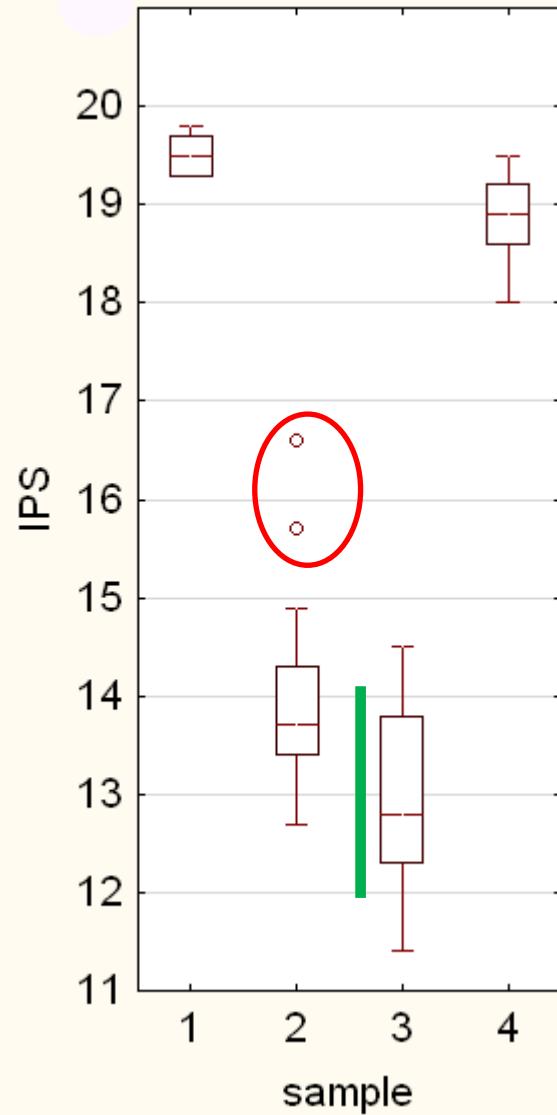

Prof. Dr. Bart Van de Vijver, National Botanic Garden of Belgium

Data analysis: M. Kahlert

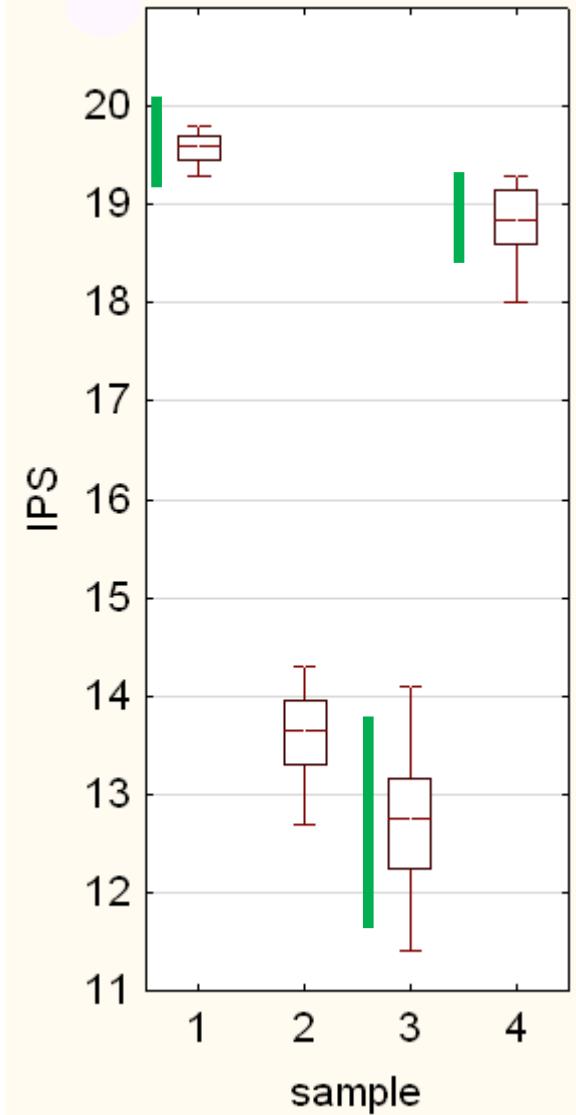

NORBAF intercalibration 2011

All participants

Participants with BC < 60%
excluded (final result
intercalibration)

Additionally, participants
with BC < 70% in sample 2
excluded (according to Kelly
2001, low diversity)

Samples

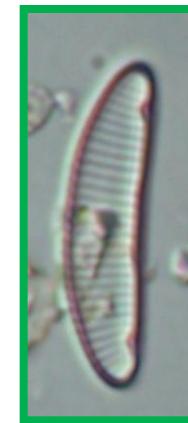

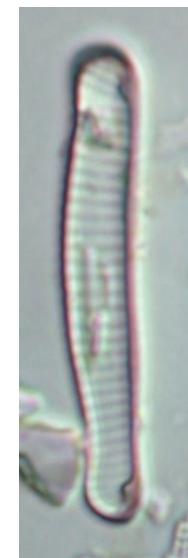

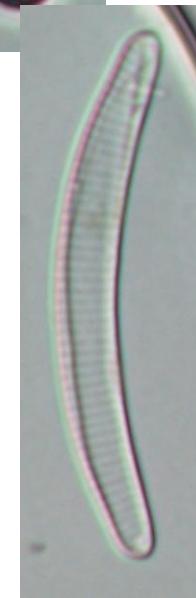

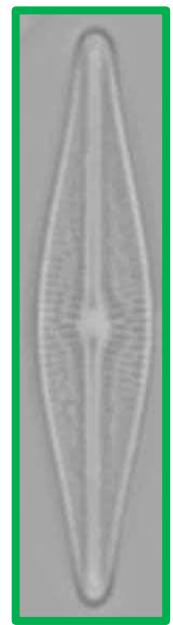

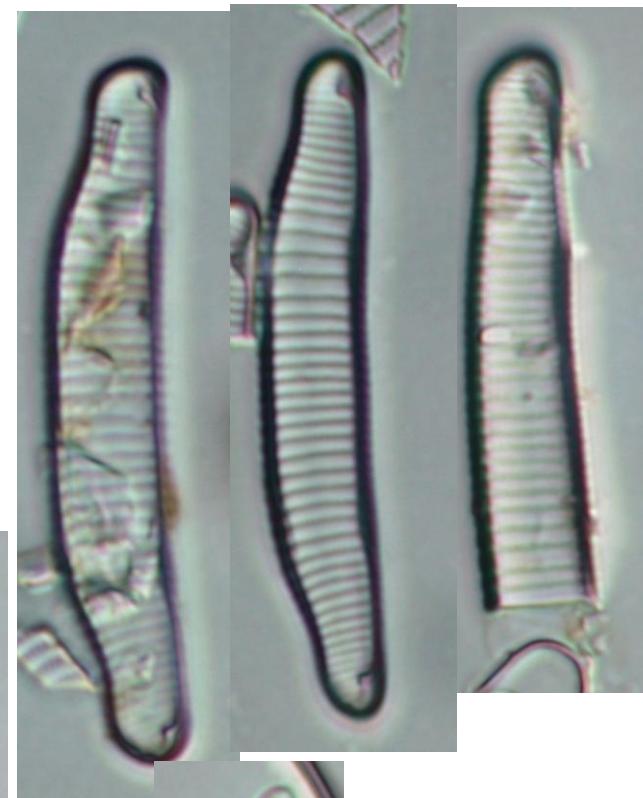

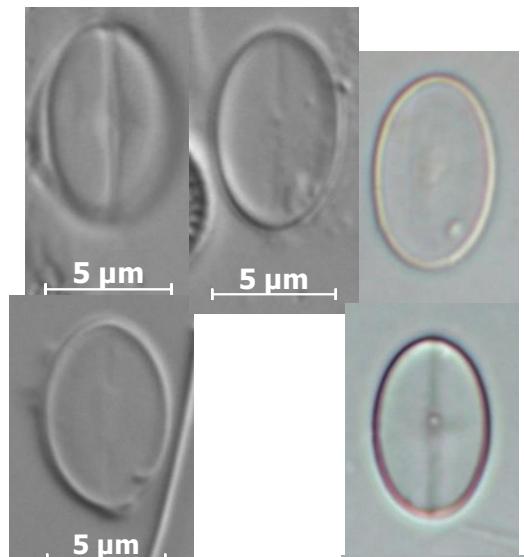

- Nr 1: [Örvallsbäcken 4241](#), 2012-09-19 (project: IKEU - Integrated Studies of the Effects of Liming Acidified Waters).
Chemistry (12 month period before sampling):
 $\text{pH}_{\text{minimum}} \text{ 5,3}$, $\text{pH}_{\text{mean}} \text{ 5,9}$
 $\text{TP}_{\text{mean}} \text{ 12} \mu\text{g/l}$
- Nr 2: [Tullstorpså](#) (i Skåne), 2011-09-19.
(project: [Tullstorpsåprojektet](#)).
Chemistry (12 month period before sampling):
 $\text{pH}_{\text{minimum}} \text{ 7,5}$, $\text{pH}_{\text{mean}} \text{ 7,9}$
 $\text{TP}_{\text{mean}} \text{ 159 } \mu\text{g/l}$

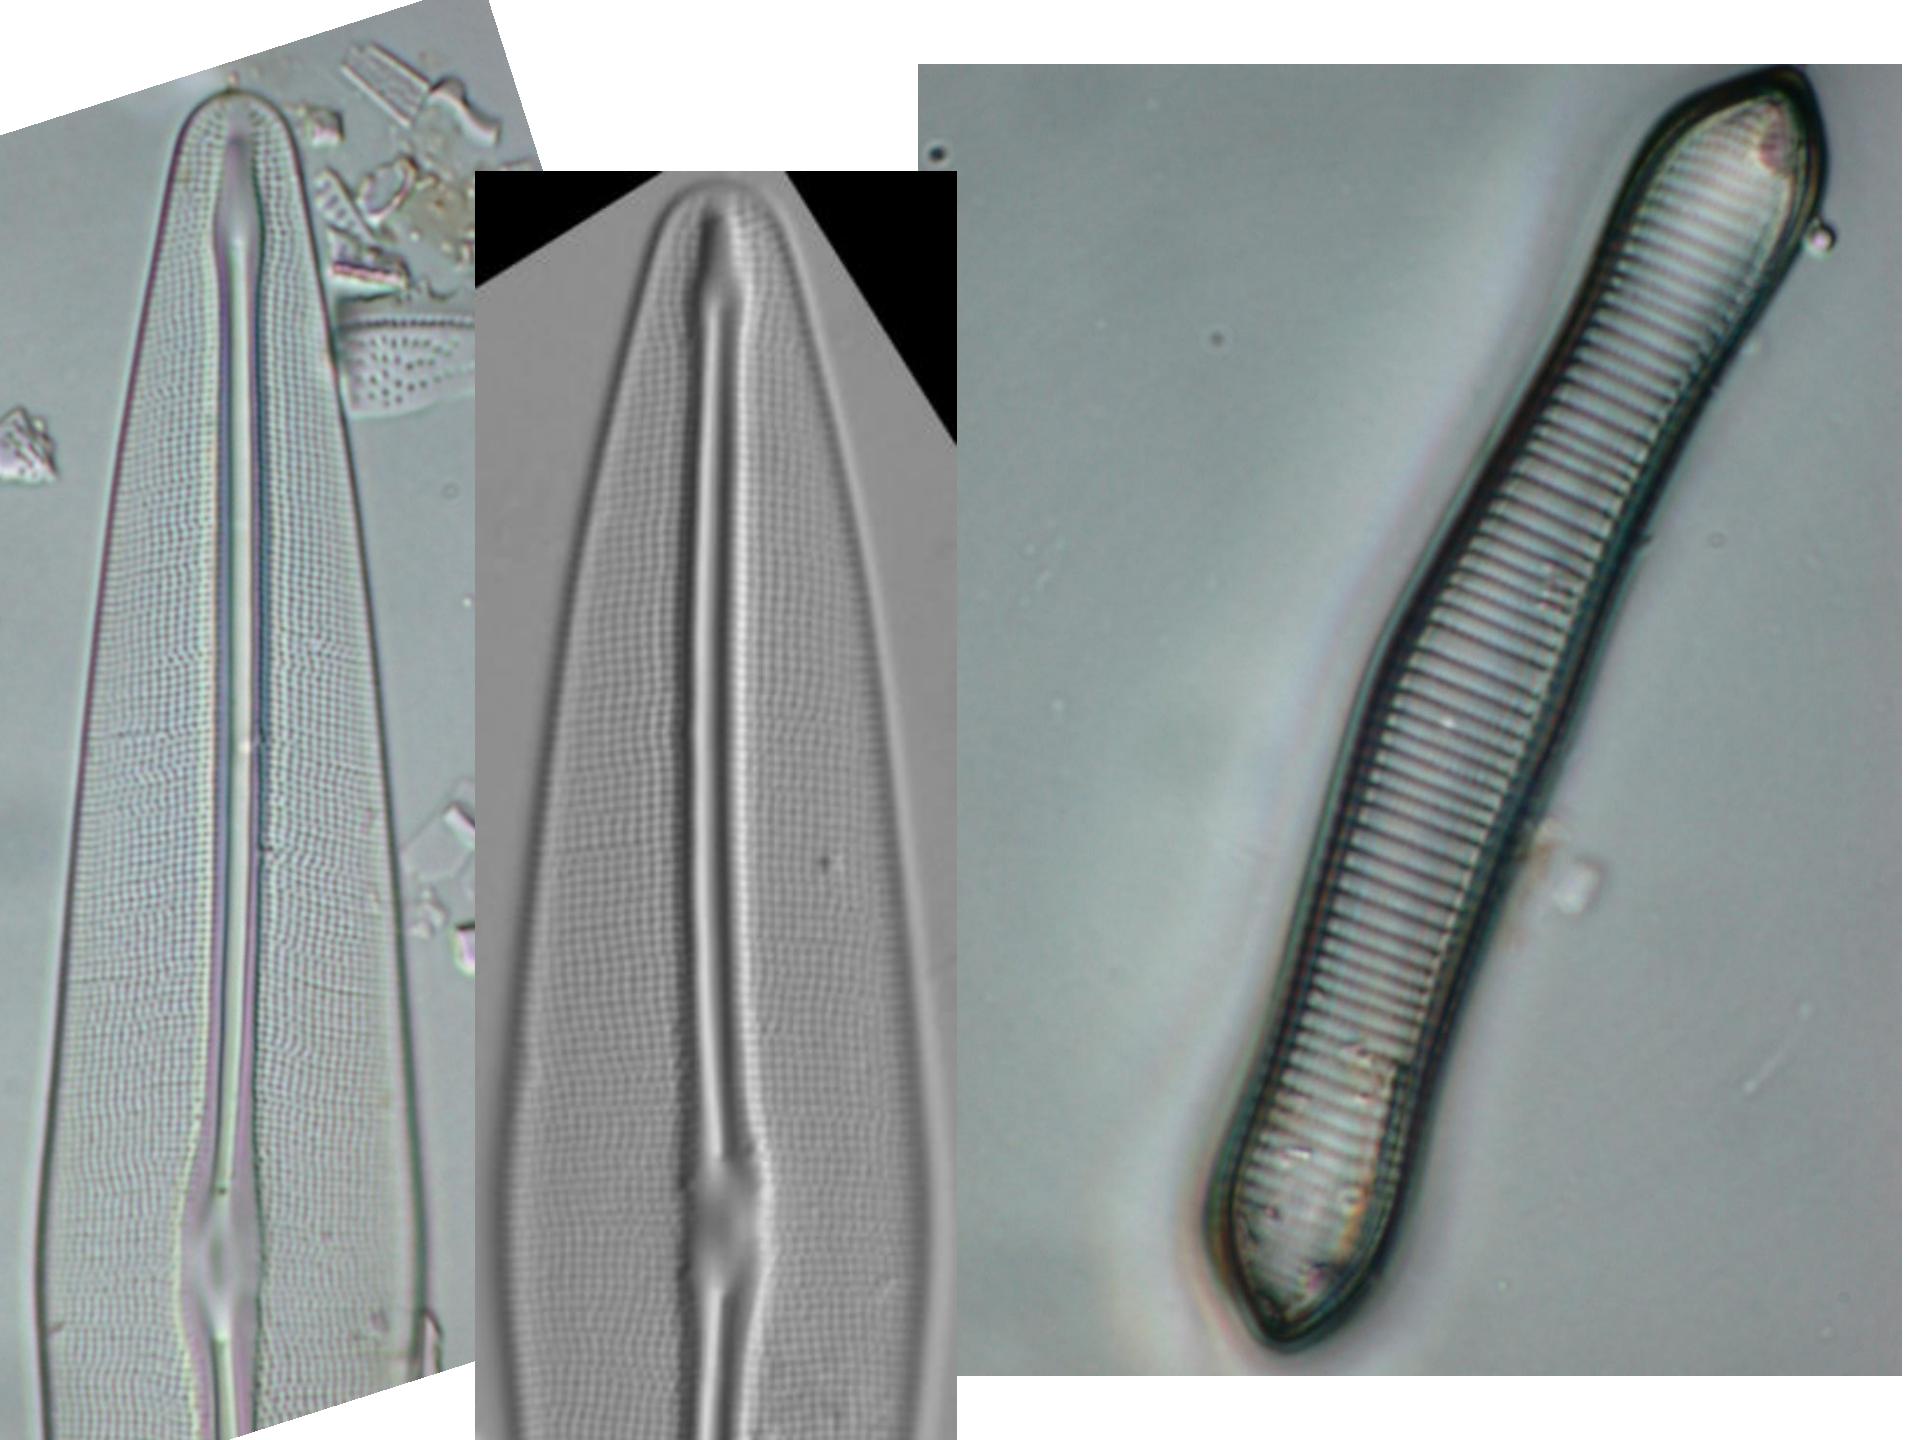

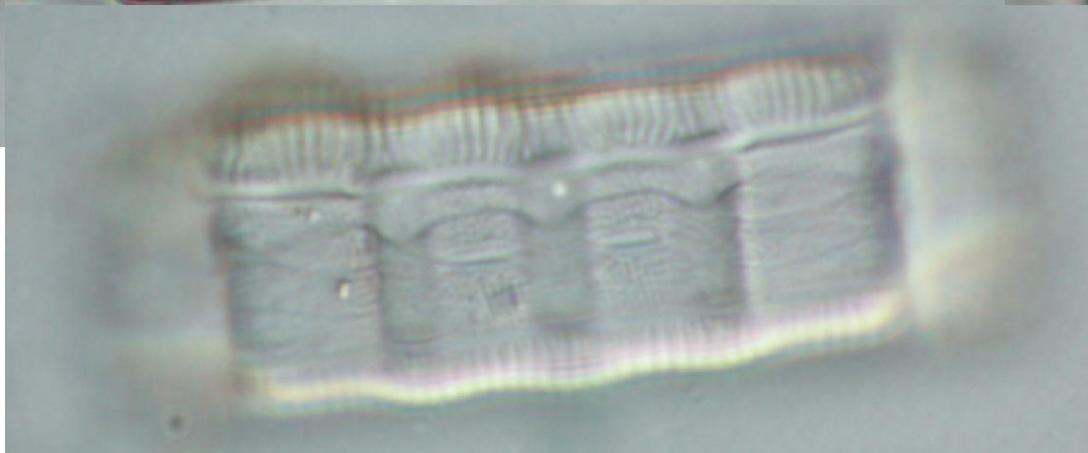

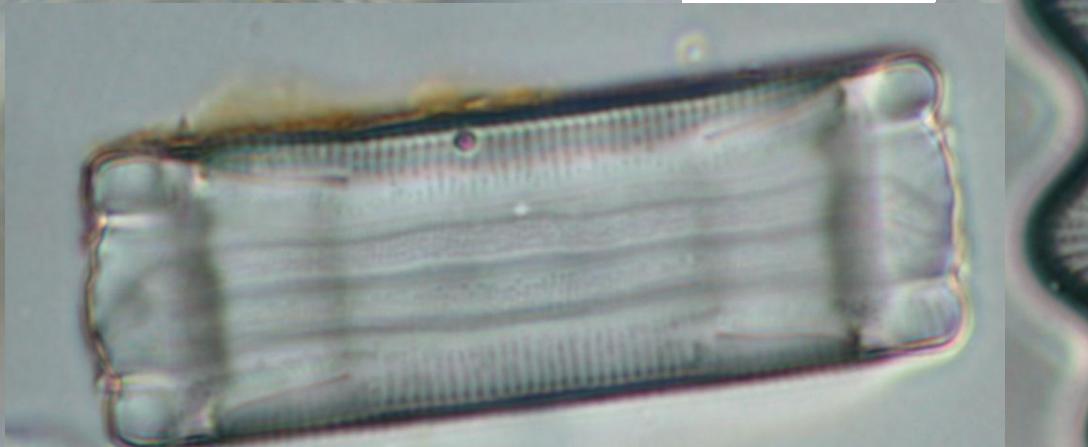

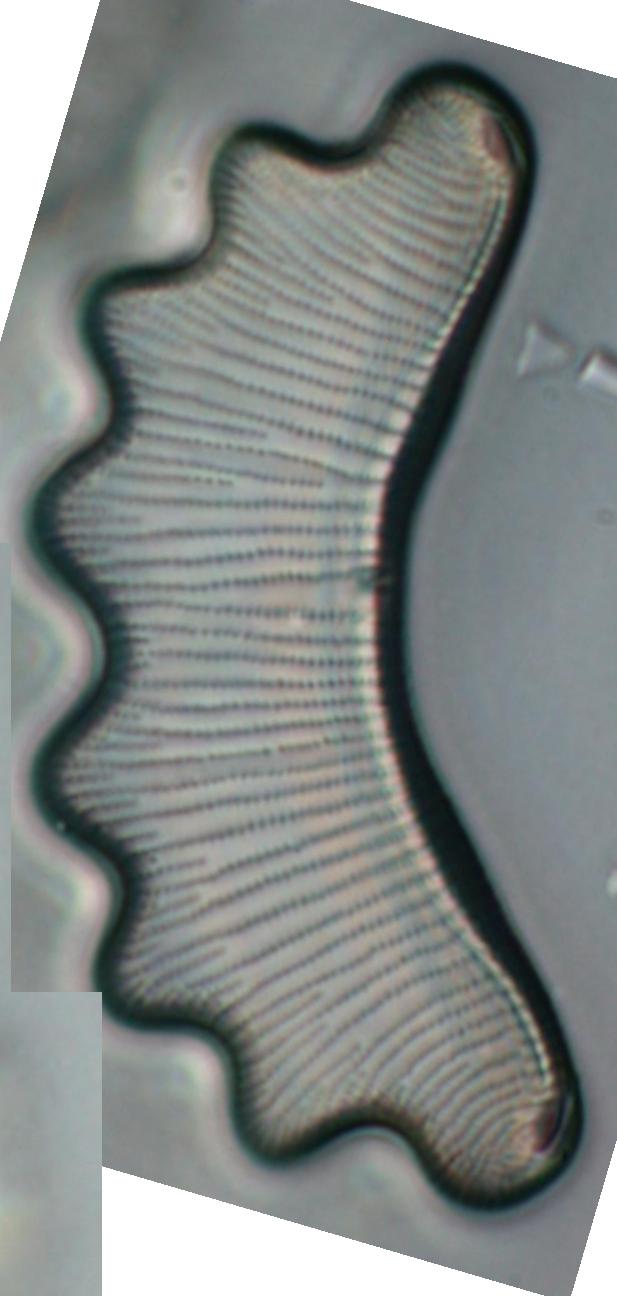

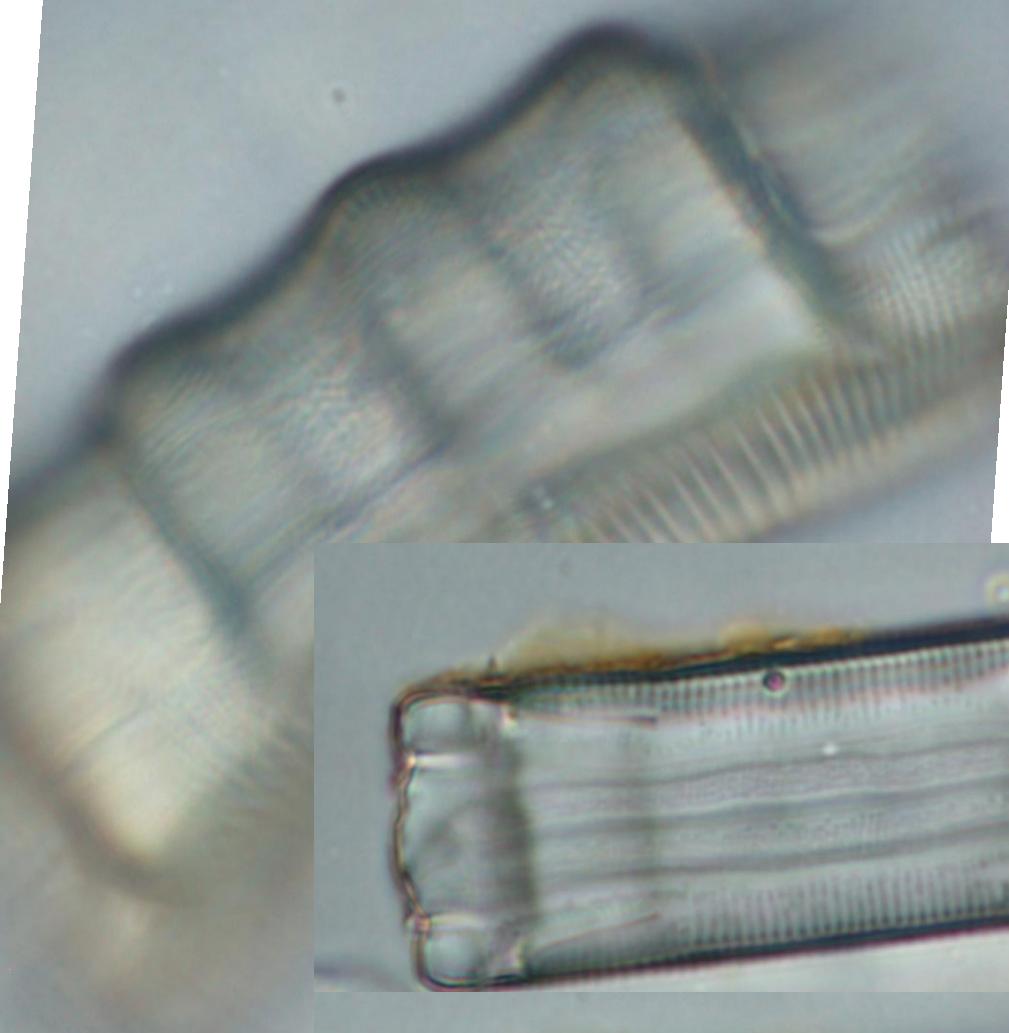

Dominating taxa – sample 1

		%
<i>Brachysira neoexilis</i>	BNEO	3,5
<i>Eunotia bilunaris</i> var. <i>mucophila</i>	EBMU	2,1
<i>Eunotia formica</i>	EFOR	5,1
<i>Eunotia incisa</i> var. <i>incisa</i>	EINC	7,1
<i>Eunotia minor</i>	EMIN	11,1
<i>Eunotia rhomboidea</i>	ERHO	4,6
<i>Frustulia erifuga</i>	FERI	9,4
<i>Psammothidium kuelbsii</i>	PKUE	2,5
<i>Tabellaria flocculosa</i>	TFLO	16,5
<i>Tabellaria quadrisepata</i>	TQUA	2,1

Information about taxa pooling before analysis

Sample 1

- Taxa only identified to genus removed from analysis
- AMIN all three groups pooled (as there were few valves, error of measurements high, not a participant error)
- Direct synonyms pooled (e.g. FGRA and FCGR, EETE and ETEN etc.)
- *Fragilaria capucina* var. *capucina* (FCAP), *F. capucina* Desmazieres s.l. (FCAPsl), *Fragilaria capucina* group 3 (width < 3 µm, alternate striae 9-14 in 10 µm) (FCP3) and *Fragilaria capucina* s.l. (FCPGsl) all pooled to FCAPsl
- *Frustulia rhombooides* (Ehrenberg) De Toni (FRHO) changed to FERI
- *Fragilaria pinnata* (FPIN), *Staurosirella pinnata* (SPIN), *Staurosira pinnata* var. *pinnata* (SRPI) and *Staurosira pinnata* s.l. (SRPIsl) all pooled to SRPIsl
- New names for *Eunotia* taxa pooled into *Eunotia* sp.

Threshold was set to BC 55% for both samples because of very high diversity

RESEARCH NOTE

USE OF SIMILARITY MEASURES FOR QUALITY CONTROL OF BENTHIC DIATOM SAMPLES

M. G. KELLY*

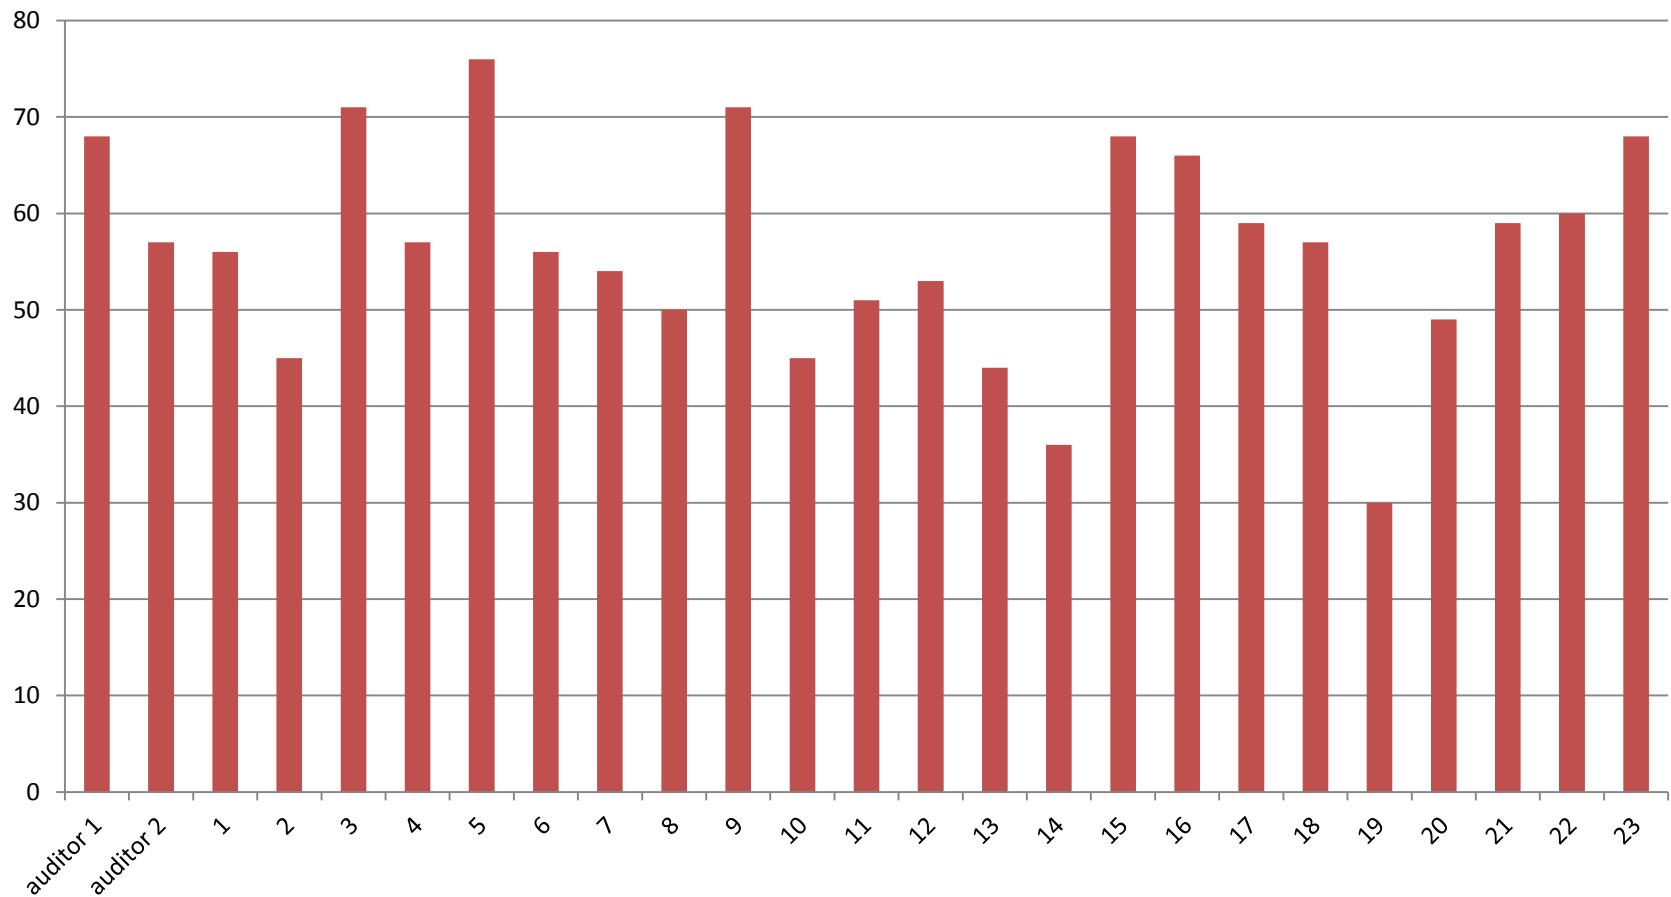

Bowburn Consultancy, 11 Monteigne Drive, Bowburn, Durham DH6 5QB, UK

(*First received 22 March 2000; accepted in revised form 1 November 2000*)

Abstract—A method for evaluating the similarity of replicate benthic diatom samples based on the Bray–Curtis similarity measure is described. This technique may be useful as part of quality control procedures where objective performance measures are required. Levels of similarity >60% typically indicate good agreement between the primary analyst and auditor. However, an evaluation of 57 comparisons indicated that achievable levels of similarity were dependent upon the species diversity of the sample, with samples with high species diversity typically having lower levels of similarity than samples with low species diversity. Whilst a threshold value of 60% is adequate for most samples, a stiffer threshold of 70% should be applied to samples with very low levels of diversity. © 2001 Elsevier Science Ltd. Key words—algae, diatoms, rivers, monitoring, eutrophication, quality assurance

Taxa number – sample 1

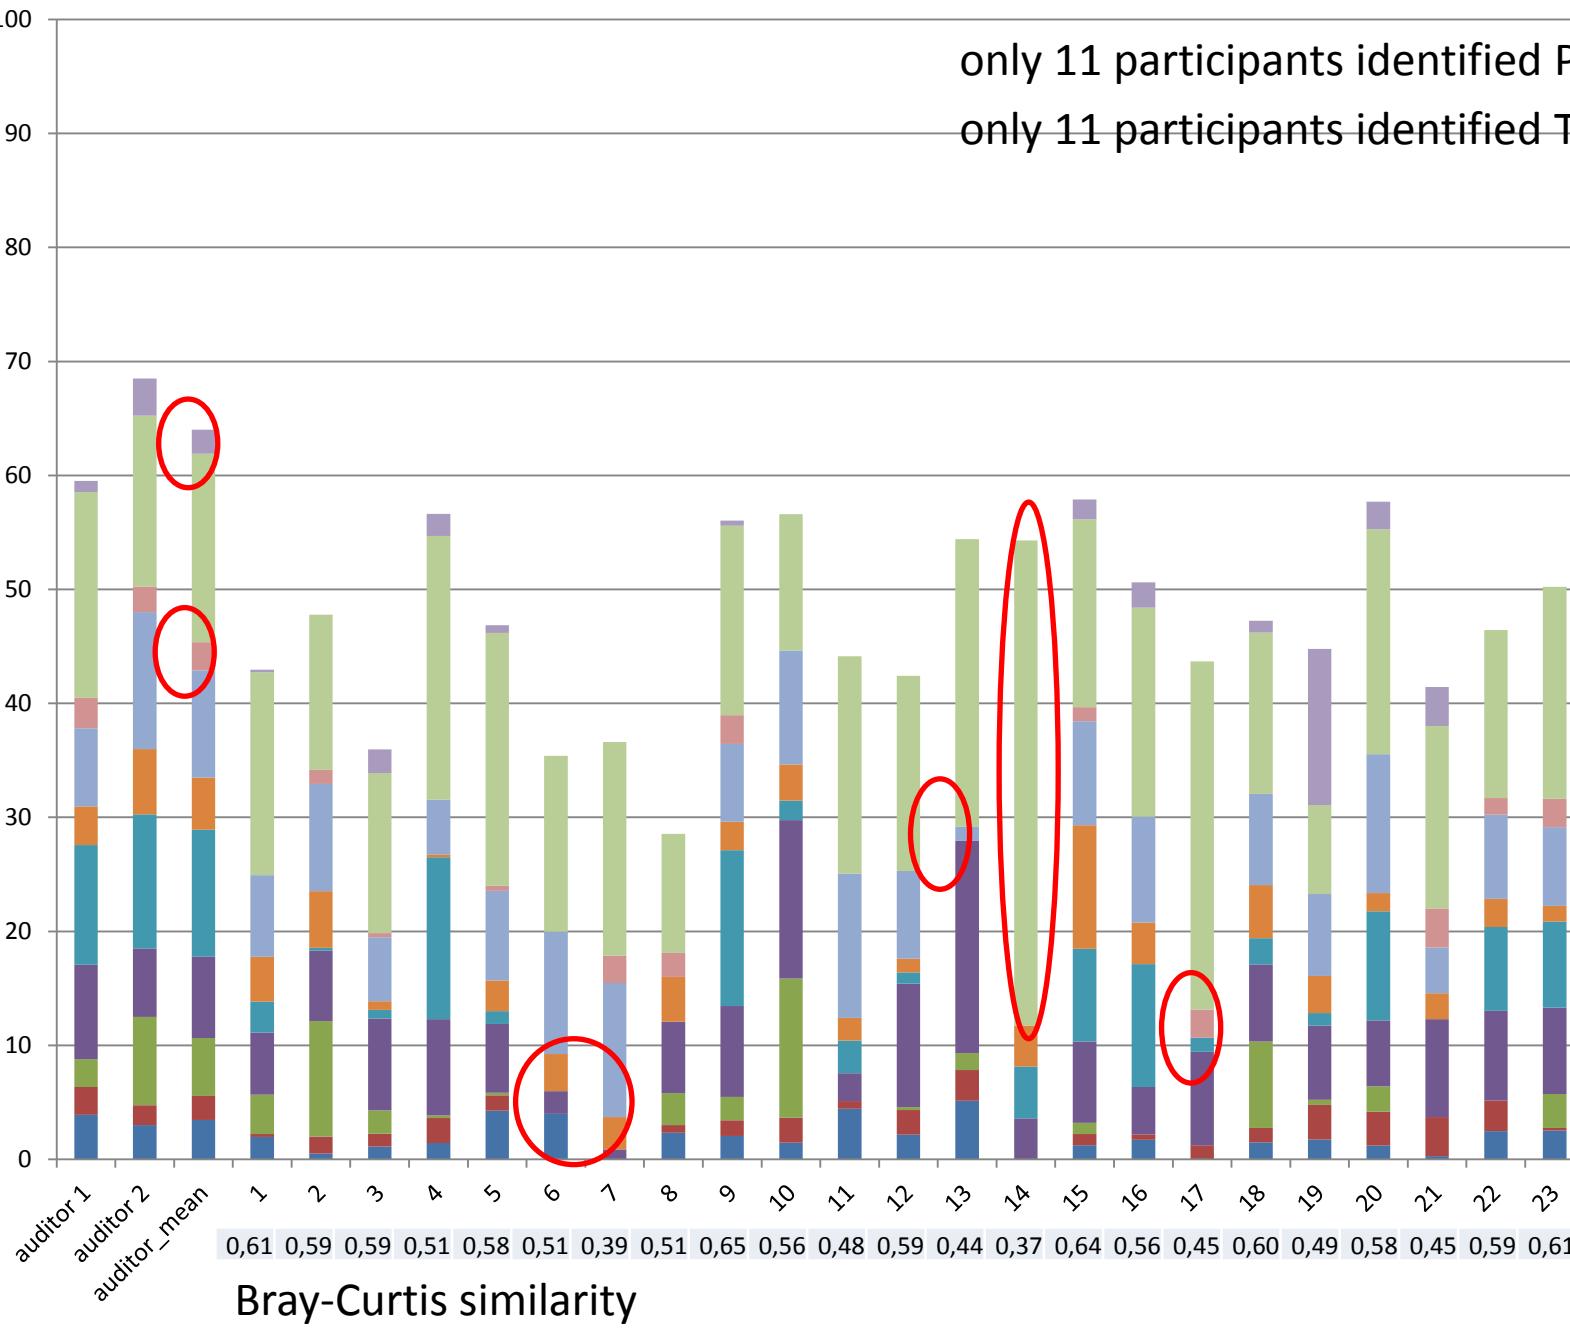

Diversity Hills N': 14,8 (mean of auditors)

Index results – sample 1

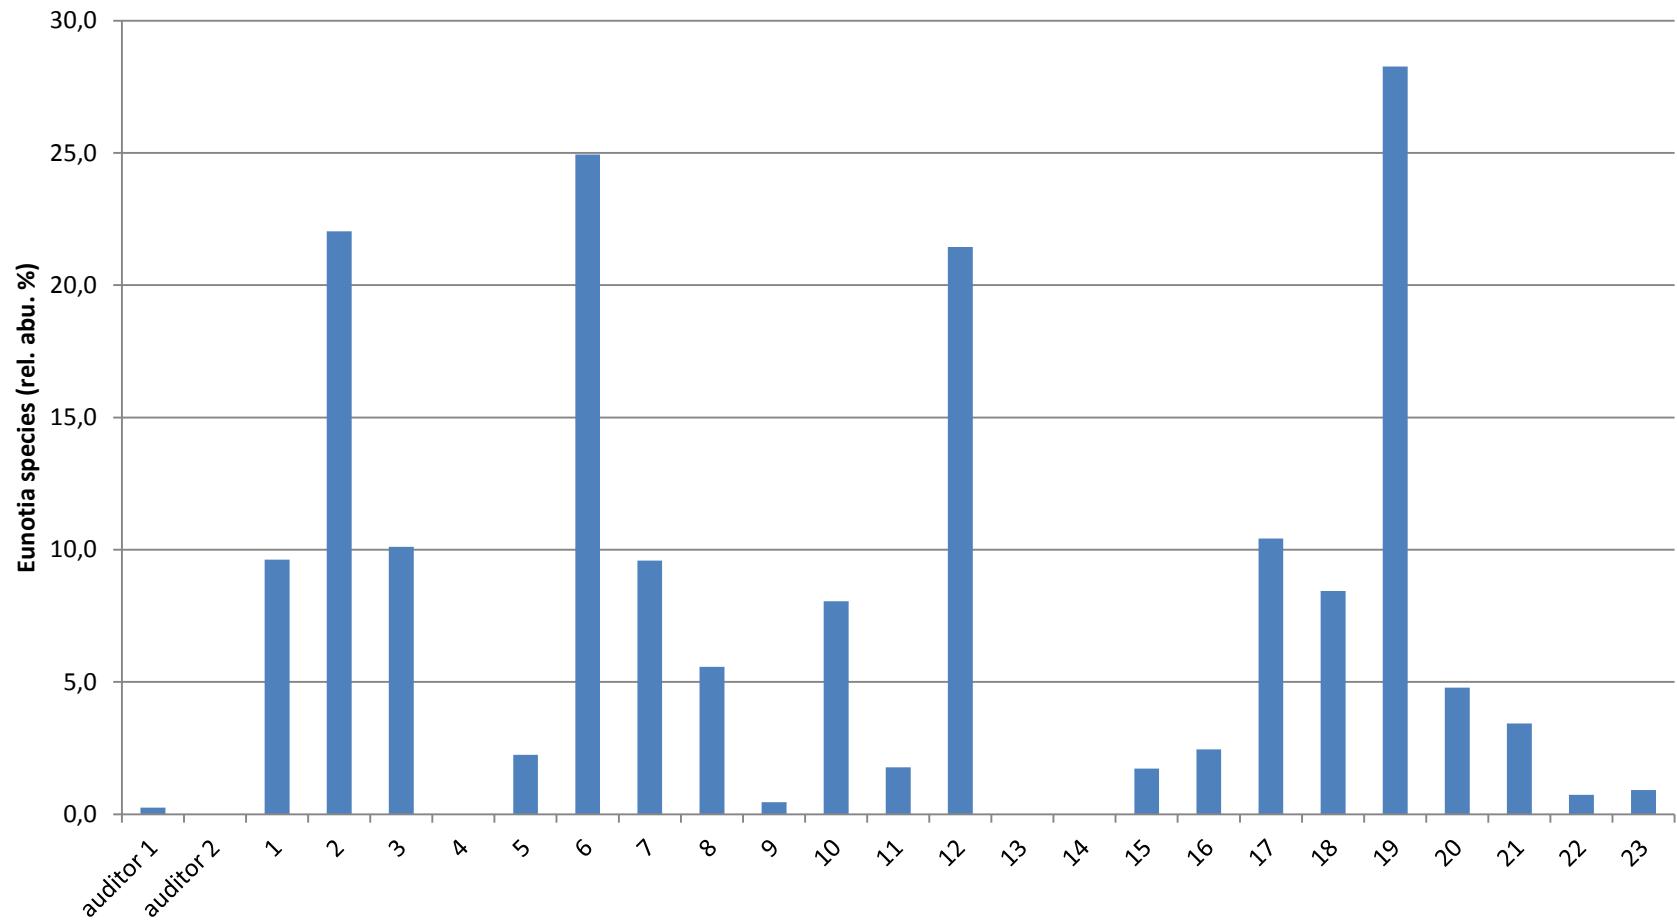

Participants from same laboratory are similar to each other! -> harmonization effect!

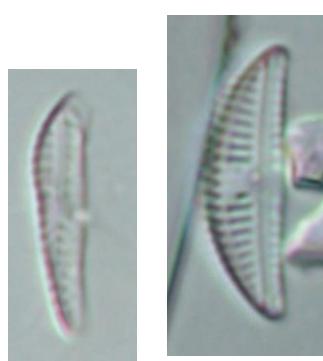

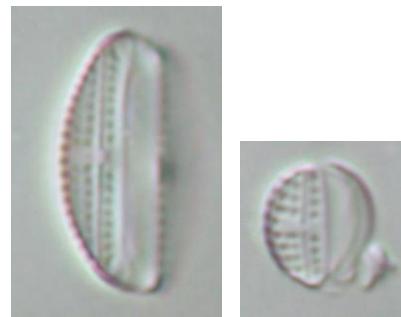

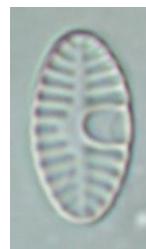

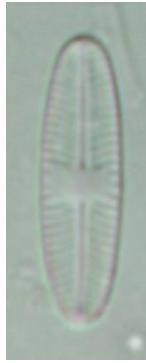

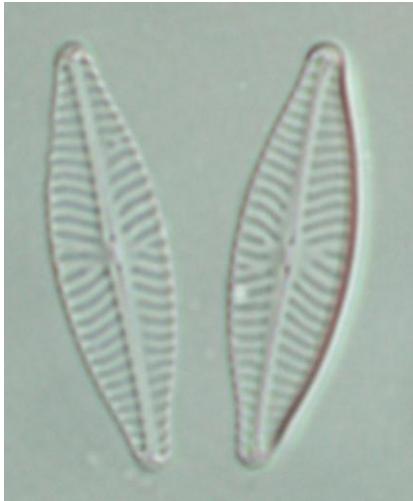

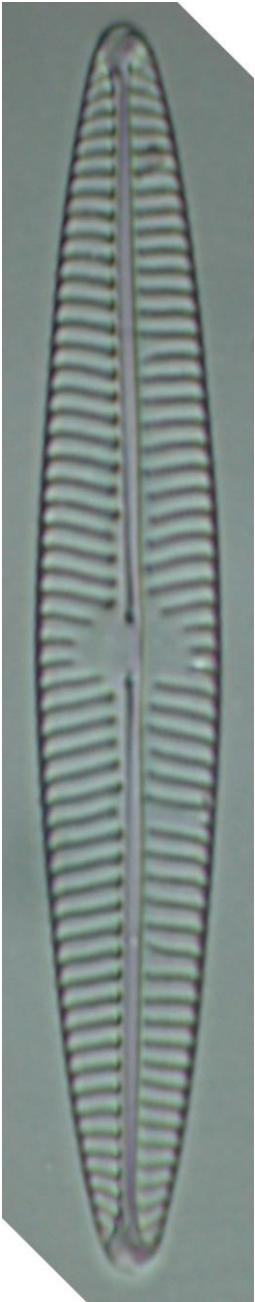

- TQUA
- TFLO
- PKUE
- FERI
- ERHO
- EMIN
- EINC
- EFOR
- EBMU
- BNEO

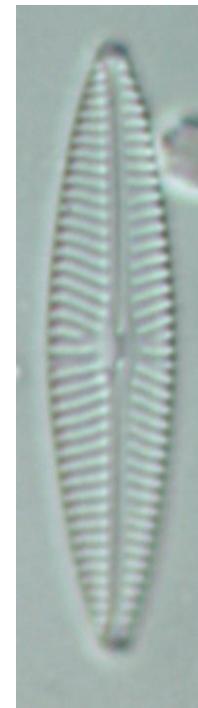

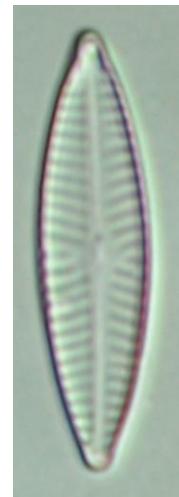

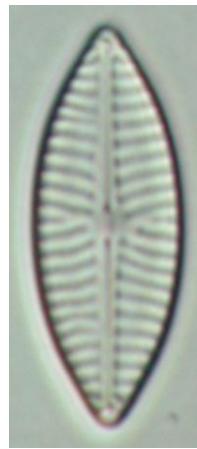

Eunotia species (mostly girdles)

Dominating taxa – sample 2

<i>Amphora pediculus</i> s.l.	APEDsl	18,8
<i>Achnanthidium minutissimum</i> group III (mean width >2,8µm)	ADM3	5,3
<i>Planothidium frequentissimum</i>	PLFR	9,1
<i>Navicula tripunctata</i>	NTPT	6,6
<i>Navicula reichardtiana</i>	NRCH	4,4
<i>Mayamaea atomus</i> var. <i>permitis</i>	MAPE	8,4
<i>Mayamaea atomus</i> var. <i>alcimonica</i>	MAAL	3,6
<i>Fistulifera saprophila</i>	FSAP	5,9
<i>Eolimna subminuscula</i>	ESBM	5,6
<i>Eolimna minima</i>	EOMI	3,2

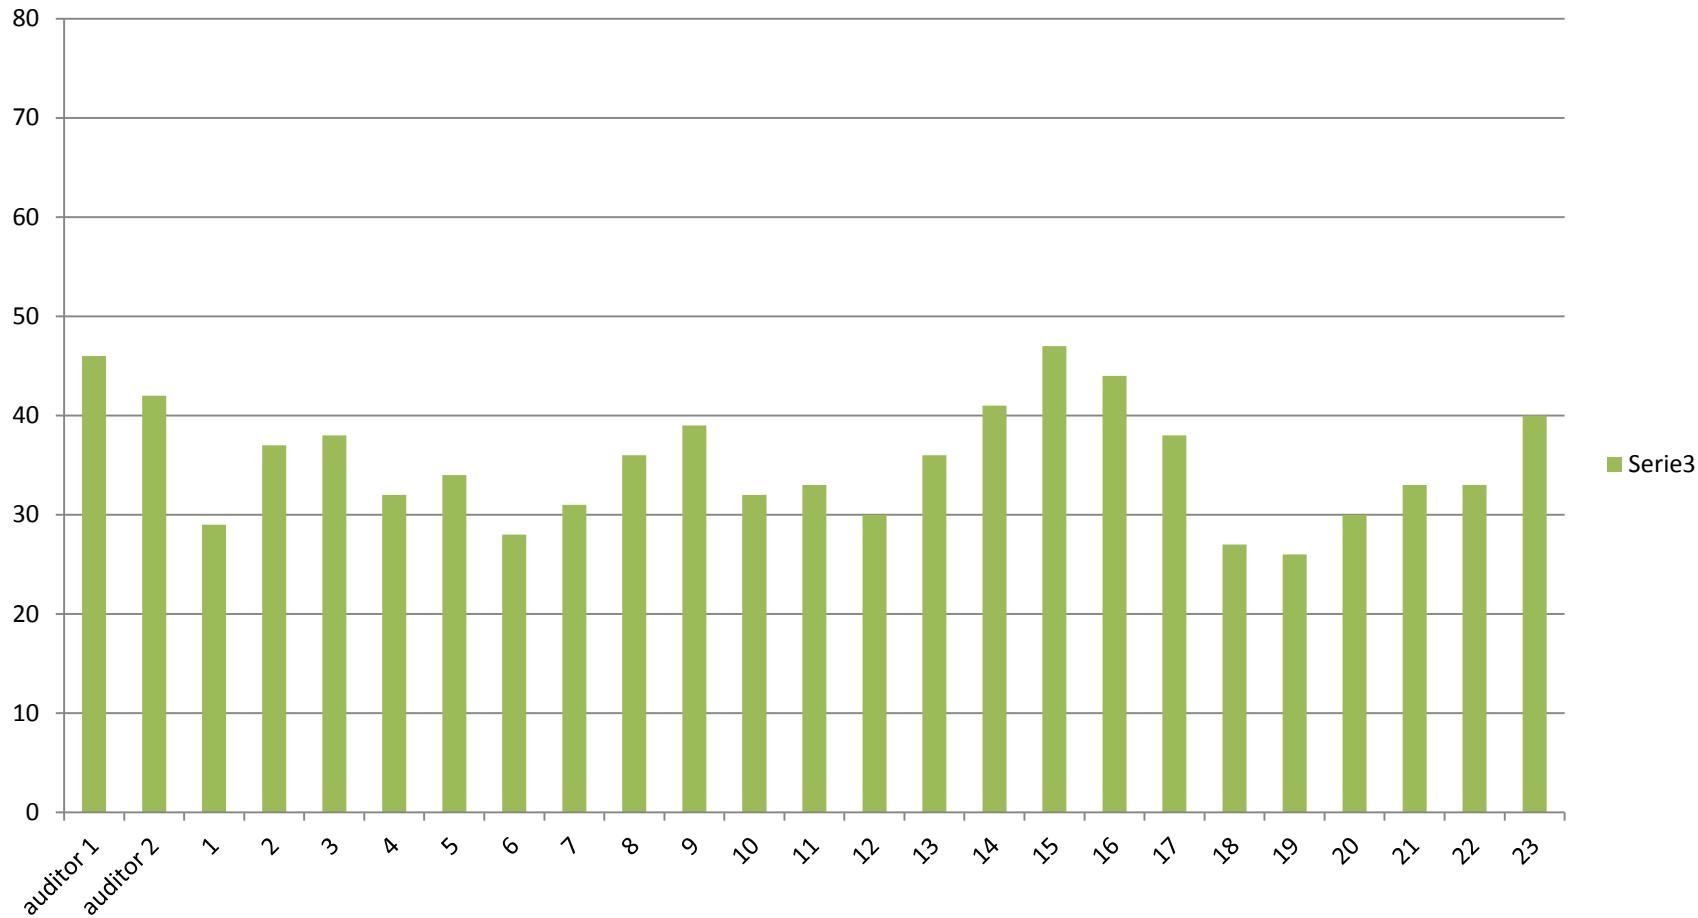

Information about taxa pooling before analysis

Sample 2

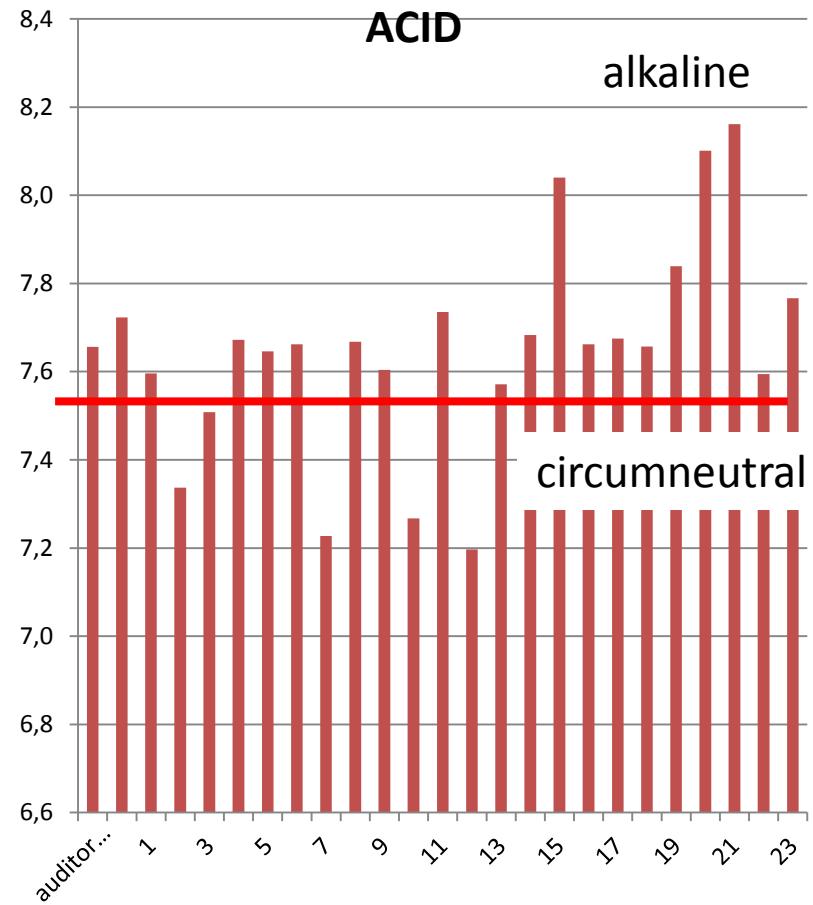

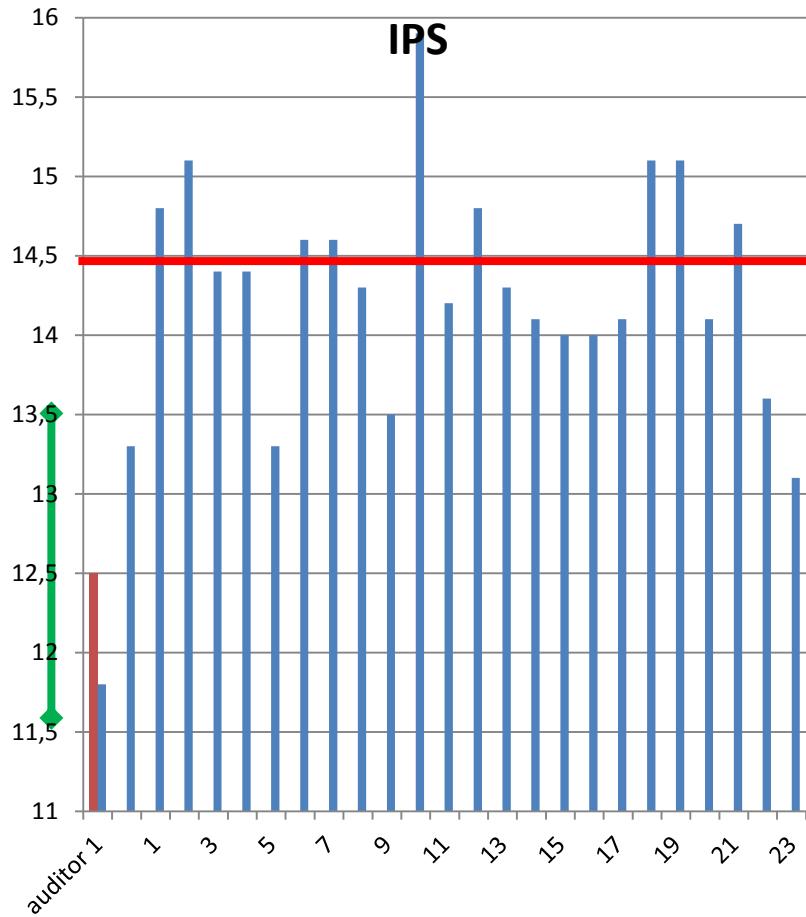

- Taxa only identified to genus removed from analysis
- Direct synonyms pooled
- *Achnanthes lanceolata* ssp. *frequentissima* var. *rostratiformis* Lange-Bertalot (ALFF) changed to *Planothidium frequentissimum* (Lange-Bertalot) Lange-Bertalot (PLFR)
- *Amphora indistincta*, *A. minutissima* and *A. pediculus* pooled to APEDsl
- *Fragilaria capucina* group 2 (FCP2) and *Fragilaria capucina* s.l. (FCPGsl) pooled to FCAPsl
- *Gomphonema parvulum* f. *saprophilum* Lange-Bertalot & Reichardt (GPAS) pooled into *Gomphonema parvulum* (Kützing) Kützing (GPAR)
- *Nitzschia levidensis* var. *salinarum* (NLSA) and *Nitzschia salinarum* pooled
- Participant 21 had AMI2 with a mean width of 2,75µm -> was moved to AMI3 because of threshold effects

Taxa number – sample 2

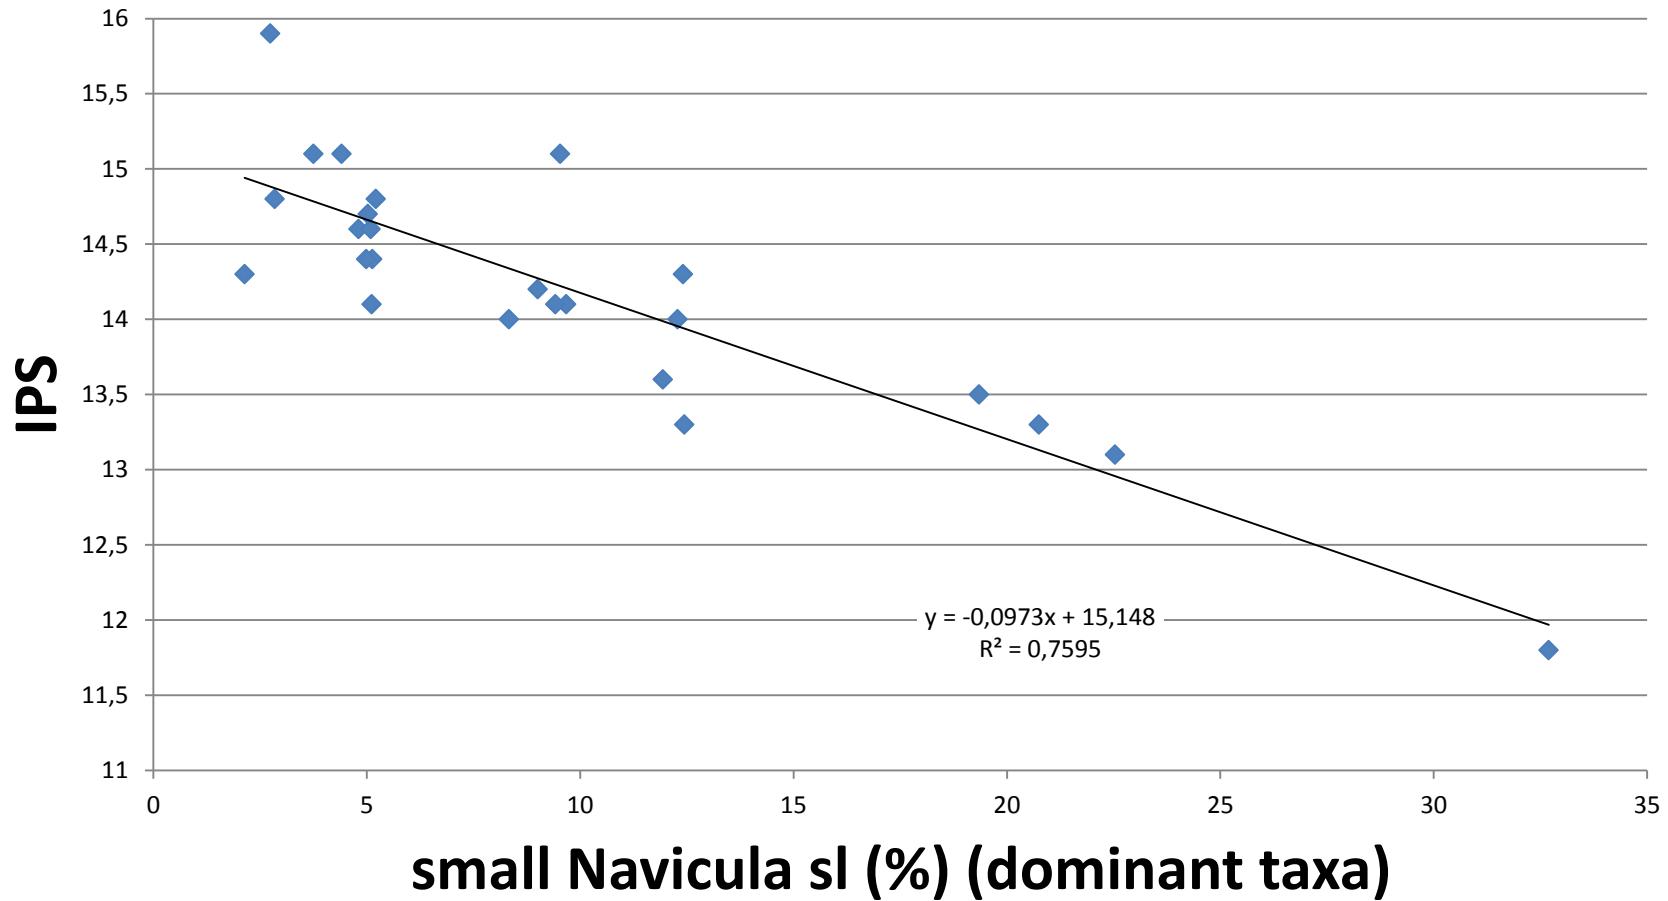

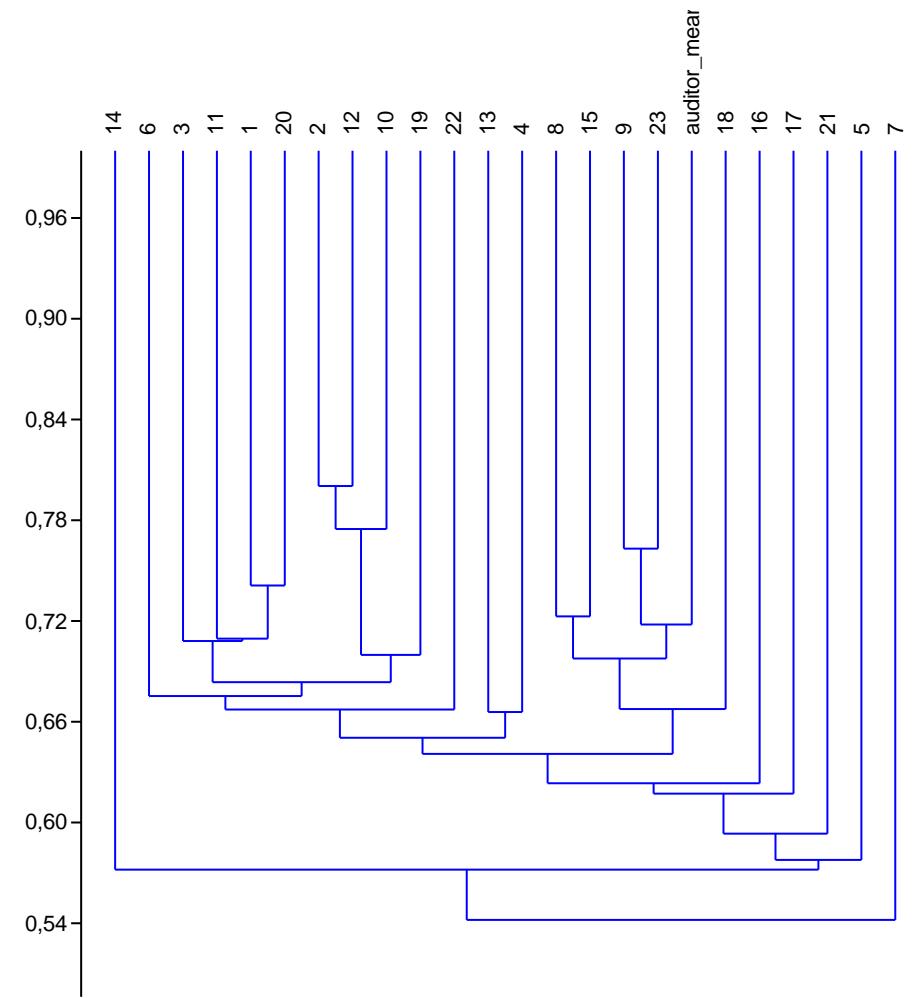

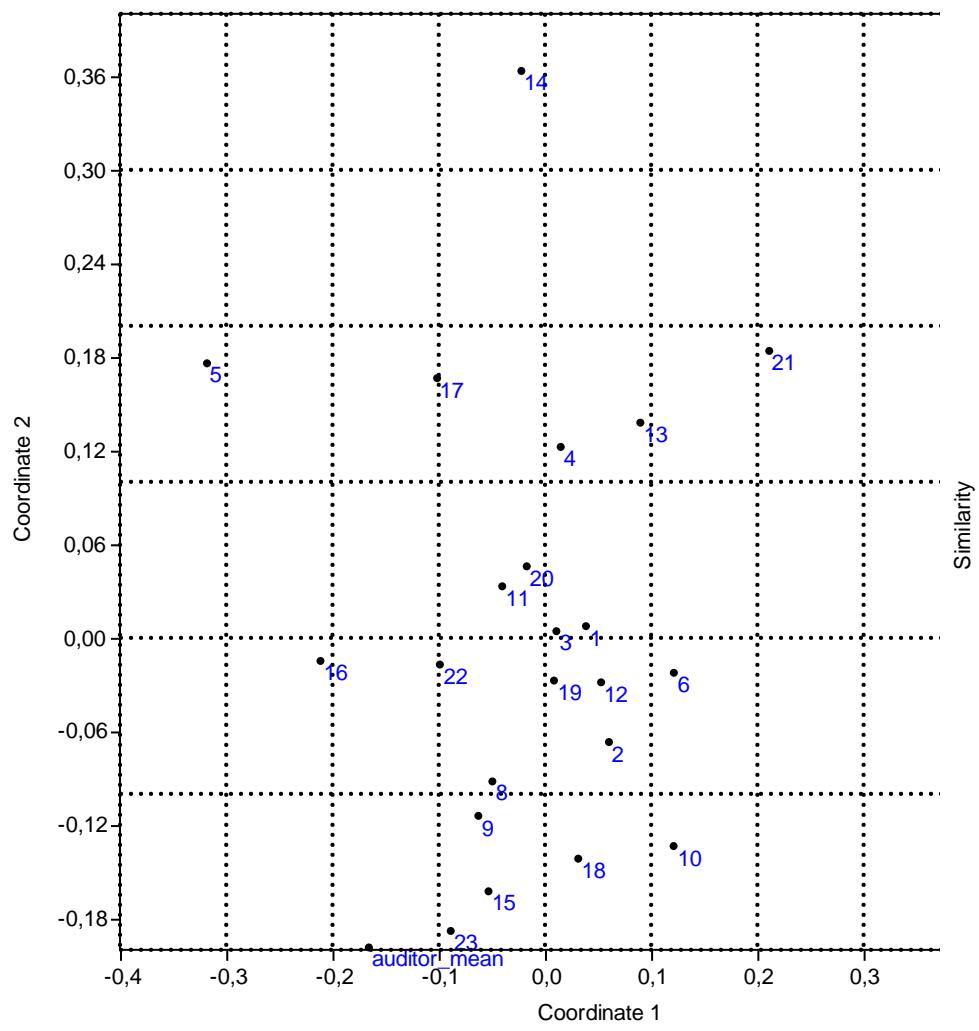

Diversity Hills N': 13,4 (mean of auditors)

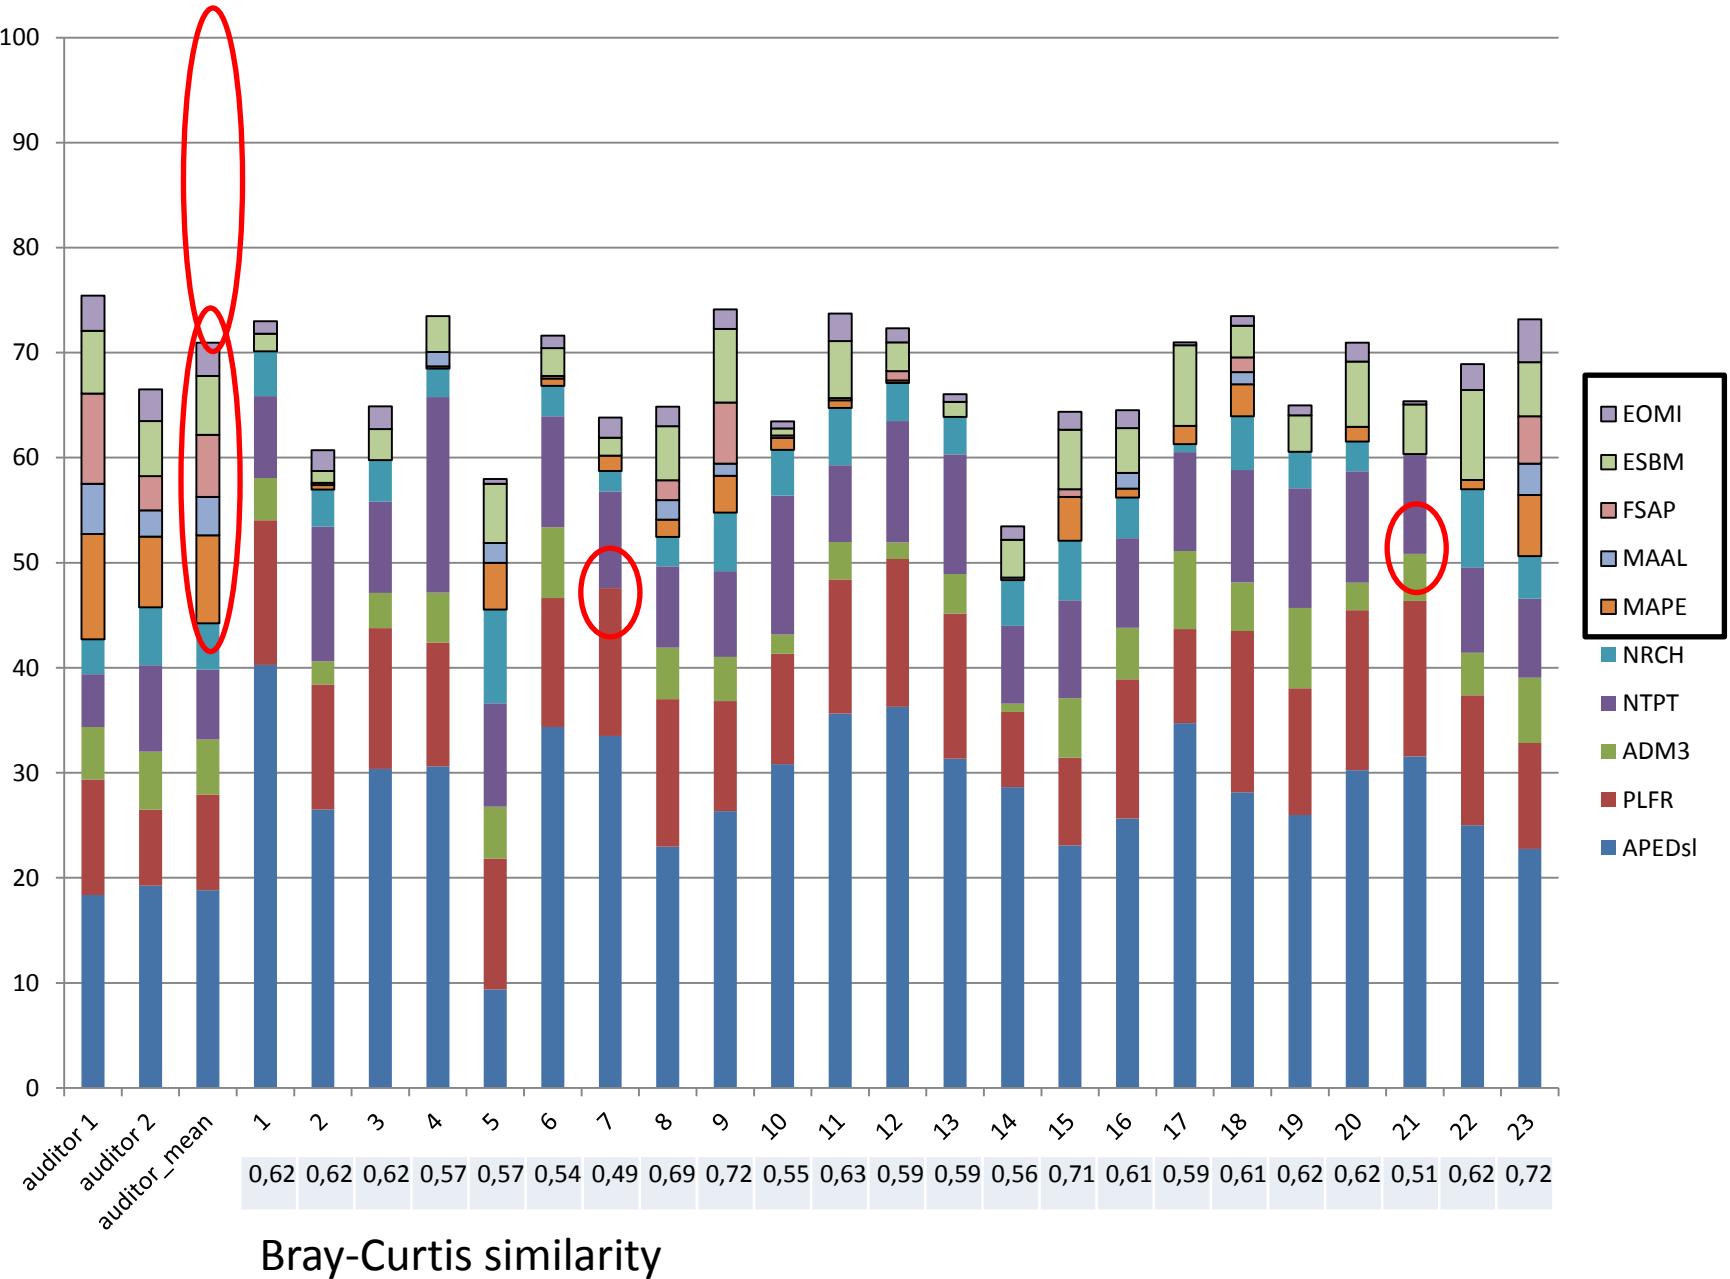

Index results – sample 2

One reason for different IPS values... small *Navicula* sl.

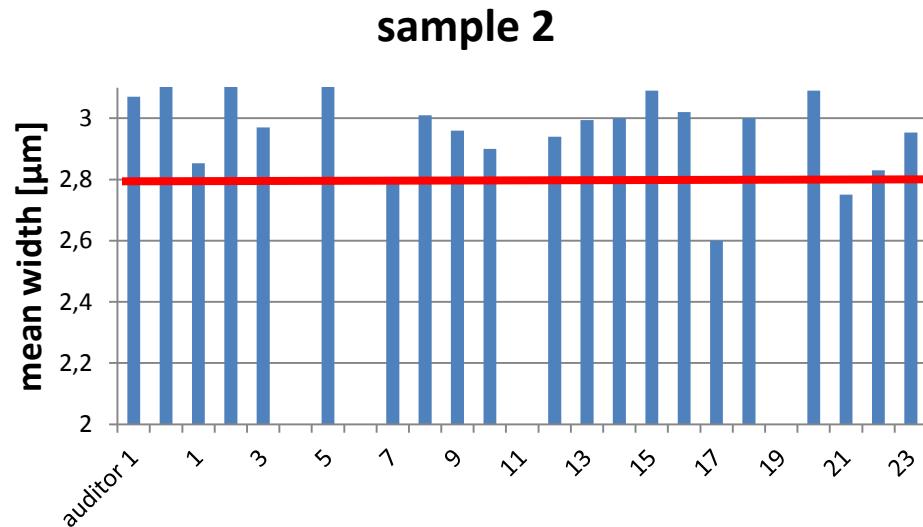

Achnanthidium minutissimum group

- Not required to identify all varieties/species of the *Achnanthidium minutissimum group* with the exception of *A. gracillimum* Lange-Bertalot and *A. caledonicum* Lange-Bertalot.
- However, it is necessary to measure the width of 10-20 valves, calculate the mean width and define by this the size group of *A. minutissimum*. Put value in sheet “mall_lokalbeskrivning”.
- Mean value shall be used in uncertainty analysis: If mean width on limit between 2 *A. minutissimum* groups -> could be the other group as well! -> could be a different IPS value -> could be a different ecological status class!
- SE diatom form

Deformations – Swedish pilot method

Categories of teratological valves:*

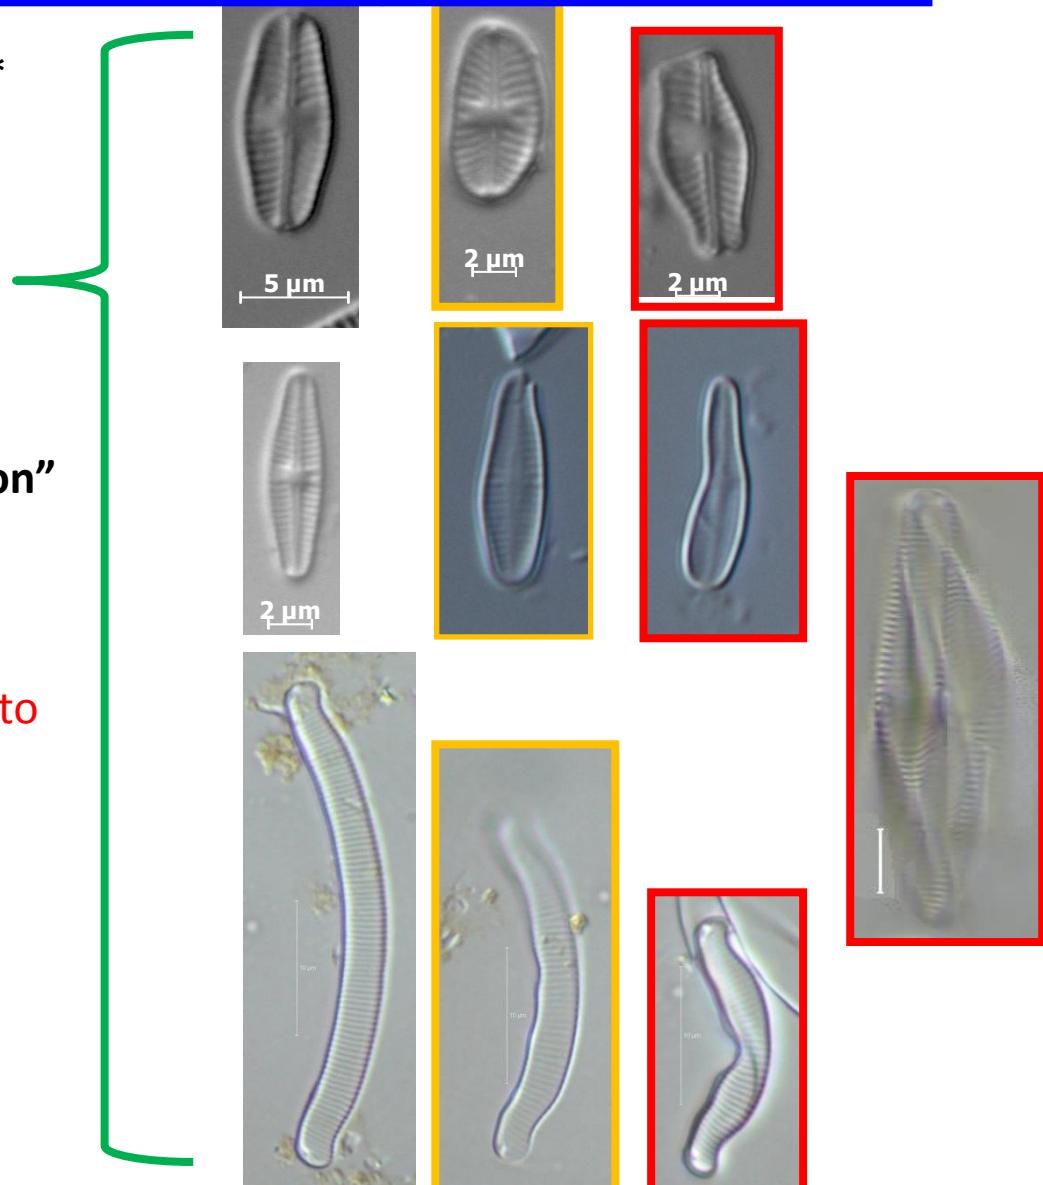

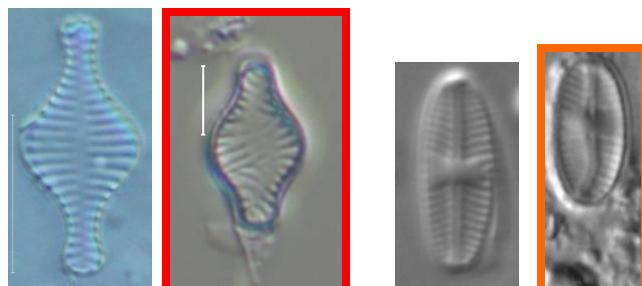

(1) "Abnormal valve outline"

- (a) "asymmetric"
- (b) "bend"
- (c) "notched"
- (d) "extensions"
- (e) "other"

(2) "Abnormal valve ornamentation"

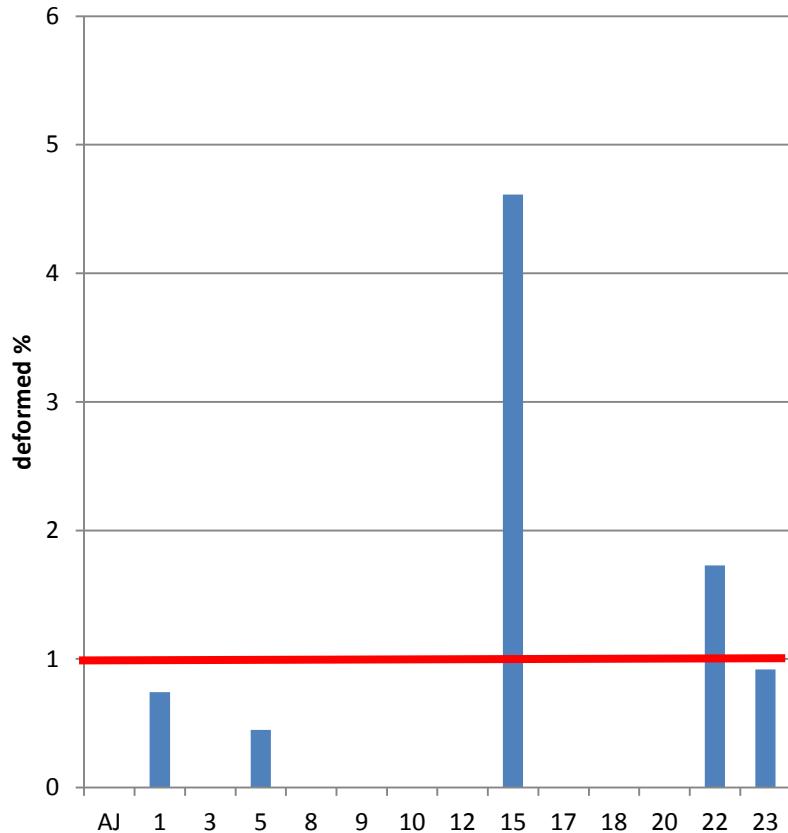

- (a) "abnormal striae"
- (b) "abnormal raphe"
- (c) "other"

Both categories to be separated into "weak abnormality" and "strong abnormality".
